PRODUCT DESCRIPTION

Technical advantages:

- No electricity required.
- Suitable for overhead work.
- Various slot widths available.
- Lightweight and handy for all mortar and plaster up to 4 mm grain.
- Gasket set available as a replacement part.
- Easy to clean.

Mortar pump from B&M, the small helper on all construction sites that have smaller quantities to work with. A hand tool that does not require electricity. These hand mortar pumps are suitable for cavity filling, joints, door or window frames. These mortar pumps (all models) allow for effortless overhead work.

How it works:

- Insert the pump with the opening into premixed material.
- Pulling the piston creates a vacuum that pulls the material into the pump chamber.
- Insert mortar into joints, sides or cavities using piston pressure
