

Boscaro Conical Concrete Skip Central Discharge With 2M Rubber Hose 500L

SKU: CT-50N

PRODUCT DESCRIPTION

Concrete skip with rubber hose
CT Model

Specifications:

- Capacity: 500L 1300kg
- Weight: 120kg
- Dimensions: 1250h x 1050

HARD WORK NEAT JOB

We offer our esteemed clients an exclusive range of concrete buckets with lever and rubber hose. With the long flexible hose (? 200 mm – standard length 2 mt. / available in different lengths on demand) it's easier to pour concrete into columns walls and formworks and to control the flow. These buckets are highly requested as they provide smooth concrete placement and they are designed using fine quality material. Our product guarantees stability and structural strength. These buckets present a discharge gate closed automatically by spring retractors with handle-lever and rope to open the gate. These products are manufactured with various capacities as listed below and can reach over 3000 l capacity on demand. The customer can require specific sizes for the batching plants.

All our concrete buckets are built to meet or exceed the regulations of EN ASME and UNI and come with the required labels certificates and user and maintenance manual.
