PRODUCT DESCRIPTION

We present you our BTB series. This range of traditional circular muck skips is used for muck and waste removal and general site rubbish clearance.

The skip features two safety catches. When these safety locks are opened by hand the skip empties automatically in response to the center of gravity of the lifting arm. Once filled it can be easily transported to the dumping area.

All our buckets are built to meet or exceed the regulations of EN, ASME and UNI and come with the required labels, certificates and user and maintenance manual. All our products are covered by a 1-year warranty.
